

The Inside Story*

Signature Series

One of the most important features of your Signature Series VersaGoal basketball system is a component you don't even see ...

VersaGoal patented **Compression Height Adjustment Mechanism** is the feature that allows the rim height of your VersaGoal to raise and lower infinitely from 6' to 10'. VersaGoal's unique height adjustment mechanism innovation provides a smooth, effortless adjustment with a simple turn of the height adjustment handle and is superior to standard tension height adjustment systems with respect to ease of adjustment, longevity, and safety.

Each VersaGoal Basketball System is equipped with our **Exclusive 3/8" Competition, Fully-Tempered Glass Backboard**. Built to withstand the toughest playing environments in all kinds of weather, the innovative design of the VersaGoal Glass Backboard combines unparalleled dynamic ball response with unequalled lifetime durability. Goalsetter Glass Backboards are available in the following sizes: 42" x 72", 38" x 60", 36" x 54", and 32" x 48". Acrylic Backboards are also available in all four sizes.

The Internal Compression Height Adjustment Mechanism is entirely concealed within the length of the pole, and the adjustment handle can easily be reached by the smallest competitors.

Ground Anchor

The VersaGoal Patented Ground Anchor Hinge System provides a solid foundation to ensure superior performance and durability. The Ground Anchor Hinge System allows complete assembly of the VersaGoal goal before it is raised upright.

The removable Internal Height Adjustment Handle and optional keyed pinlock allow the Goalsetter goal to be locked at any height.

* Cut-out portion of mast is for illustration of compression height adjustment mechanism only.
